WARNING

CALIFORNIA PROPOSITION 65 WARNING

Engine exhaust and some of its constituents are known in the state of California to cause cancer, birth defects, and other reproductive harm.

SAFETY INFORMATION

Introduction

This Safety Alert Symbol is used to call attention to items or operations which may be dangerous to those operating or working with this equipment. The symbol can be found

throughout this manual and on the unit. Please read these warnings and cautions, along with all decals, carefully before attempting to operate the unit. Make sure every individual who operates or works with this equipment is familiar with all safety precautions.

WARNING

GENERAL WARNING. Indicates information important to the proper operation of the equipment. Failure to observe may result in damage to the equipment and/or severe bodily injury or death.

CAUTION

GENERAL CAUTION. Indicates information important to the proper operation of the equipment. Failure to observe may result in damage to the equipment.

Safety Precautions

LETHAL EXHAUST GAS: An internal combustion engine discharges carbon monoxide, a poisonous, odorless, invisible gas. Death or serious illness may result if inhaled. Operate only in an area with proper ventilation. NEVER OPERATE IN A CONFINED AREA!

DANGEROUS FUELS: Use extreme caution when storing, handling and using fuels, as they are highly volatile and explosive in vapor state. Do not add fuel while engine is running. Stop and cool the engine before adding fuel. DO NOT SMOKE!

SAFETY GUARDS: It is the owner's responsibility to ensure that all guards and shields are in place and in working order.

IGNITION SYSTEMS: Breakerless, magneto, and battery ignition systems can cause severe electrical shocks. Avoid contacting these units or their wiring.

SAFE DRESS: Do not wear loose clothing, rings, wristwatches, etc. near machinery.

NOISE PROTECTION: Wear OSHA specified hearing protection devices.

EYE PROTECTION: Wear OSHA specified eye shields, safety glasses, and sweat bands.

FOOT PROTECTION: Wear OSHA specified steel-tipped safety shoes.

HEAD PROTECTION: Wear OSHA specified safety helmets.

DUST PROTECTION: Wear OSHA specified dust mask or respirator.

OPERATOR: Keep children and bystanders off and away from the equipment.

REFERENCES: For details on safety rules and regulations in the United States, contact your local Occupational Safety and Health Administration (OSHA) office. operated in other countries must be operated and serviced in accordance and compliance with any and all safety requirements of that country. The publication of these safety precautions is done for your information. MBW does not by the publication of these precautions, imply or in any way represent that these are the sum of all dangers present near MBW equipment. If you are operating MBW equipment, it is your responsibility to insure that such operation is in full accordance with all applicable safety requirements and codes. All requirements of the United States Federal Occupational Safety and Health Administration Act must be met when operated in areas that are under the jurisdiction of that United States Department.

Safety Decals

Carefully read and follow all safety decals. Keep them in good condition. If decals become damaged, replace as required. If repainting the unit, replace all decals. Decals are available from authorized MBW distributors. Order the decal set listed on the following page(s).

SPECIFICATIONS

	GPR99H	GPR135H	GPR135DE

Specifications subject to change without notice

No universal method or formula has been accepted for determining "Compaction Force". All manufactures employ their own method or formula.

OPERATION

Introduction

MBW Inc. equipment is intended for use in very severe applications. They are powered by four cycle engines and are available in different sizes and a selection of engines.

The MBW Reversible Plate Compactor is intended to compact various soil types. Recommended soil types include granular soils, gravel/sand mixtures, and semi-granular cohesive soils.

The MBW Reversible Plate Compactor is not recommended for use in cohesive soils nor for very hard surfaces such as concrete or asphalt.

This parts manual contains only standard parts. Variations of these parts as well as other special parts are not included. Contact your local MBW Inc. Distributor for assistance in identifying parts not included in this manual.

Before Operation

After receiving your new MBW Inc. Reversible Plate Compactor, inspect it for any visible damage done during shipment. Make sure the engine throttle works properly. Contact your nearest MBW Inc. Distributor if there are any problems.

Your new MBW Inc. Reversible Plate Compactor is shipped complete and ready for use.

- REMEMBER It is the owner's responsibility to communicate information on the safe use and proper operation of this unit to all operators.
- Review All of the Safety Precautions listed on page 1 of this manual.
- Familiarize yourself with the operation of the equipment and confirm that all controls function properly.
- Know how to STOP the equipment in case of an emergency.
- Make sure hands, feet, and clothing are at a safe distance from any moving parts.
- OIL LEVEL Check the oil level in the engine. For more information see "Lubrication" under the respective engine's "Owner's Manual" or the MAINTENANCE section of this manual.
- AIR CLEANER Check to ensure element is in good condition and properly installed.
- FUEL SUPPLY The engines on MBW Inc. Compaction equipment require an automotive grade of clean, fresh,

diesel fuel or unleaded gasoline dependent on engine type. (See Engine "Owner's Manual")

• FUEL FILTER - If clogged or damaged, replace.

Engine

Refer to the engine manual for location of all controls and features.

Starting Gasoline Engine

- Open fuel valve.
- 2. Turn engine switch to on position.
- 3. Set throttle to idle position.
- 4. Choke engine if necessary, (you may not need to choke a warm engine).
- 5. Pull starter rope repeatedly until engine starts.
- 6. Move choke to the off or open position.
- 7. Allow engine to warm up for one or two minutes.

Starting Diesel Engine

For detailed instructions refer to the engine Manual.

- 1. When starting the engine, the throttle lever on the handle must be in the idle position.
- The engine has an automatic decompression system, however it is recommended to slowly pull the starter rope until you feel a slight resistance. Let the starter rope recoil completely and pull the starter rope quickly, do not jerk the starter handle, until the engine
- Let the engine warm up in the idle position for one or two minutes.

Running Engine

- 1. After the engine warms up, fully open throttle.
- The compactor will begin vibrating and moving in a forward direction. Never leave compactor idling unattended.
- 3. The MBW Reversible Plate Compactor is designed to slowly move forward without application of the control lever. The number of passes needed to reach the compaction level desired will depend on soil type and moisture. Maximum compaction of the soil has been reached when excessive kickback is noticed in the compactor.

Stopping Engine

- 1. To stop the compactor from traveling forward, return the engine throttle to idle position.
- 2. Whenever possible, it is recommended to let the engine idle for one or two minutes before stopping.
- 3. Gas engines: Turn the switch on the engine to "STOP" position.

 Diesel engines: Move the throttle control to the "STOP" position.
- 4. Turn off the fuel valve where applicable.

Lifting/Transporting

- 1. Lift unit by center lifting eye on rollcage.
- 2. The unit must be transported in the upright position. DO NOT lay machine on its side.
- 3. Secure or tiedown unit using lift eye or roll cage when transporting.

WARNING

Always stop the engine before:

Adding fuel.

Leaving the equipment unattended, even if only for a minute.

Before making any repairs or adjustments to the machine.

MAINTENANCE

WARNING

Always exercise the stopping procedure before servicing or lubricating the unit.

After servicing the unit, replace and fasten all guards, shields, and covers to their original positions before resuming operation.

CAUTION

Always verify fluid levels and check for leaks after changing fluids.

Do not drain oil onto ground, into open streams, or down sewage drains.

Maintenance Schedule

SYSTEM	MAINTENANCE	EACH USE	EVERY 50 HOURS	EVERY 100 HOURS	EVERY 250 HOURS	YEARLY
Engine	Engine Refer to engine operator/owner manual					
	Clean cooling fins		Х			Х
Belts	Check for wear and retighten			Х		
Exciter	Check oil level		Х			
	Check for oil leaks	X				
	Change oil				Х	Х
	Tighten Bolts ¹		Х			Х
Hydraulics	Check level and refill			Х		
Hardware	Check and tighten as needed ¹		Х			х
Shockmounts	Check for cracks or tears		X			Х

^{1.} Check all hardware after the first 5 hours of use, then follow the maintenance schedule.

Fluid Levels

SYSTEM	FLUID VOLUME	RECOMMENDED OIL	
Exciter			
GPR99	32 oz. (0.95 Liter)	MBW Ground Pounder [®] Exciter Oil ¹	
GPR135	32 oz. (0.95 Liter)	MBW Ground Pounder [®] Exciter Oil ¹	
Hydraulic Oil			
GPR99	5 oz. (.24 Liter)	Chevron AW ISO32 or Rykon 32	
GRP135	5 oz. (.24 Liter)	Chevron AW ISO32 or Rykon 32	
Engine	Refer to engine operator/owner manual		

^{1.} MBW #01058---- 6-Pack (8 oz bottles) MBW #17320---- 1 quart (32 oz)

Engine Maintenance

ngine maintenance

Refer to the engine owner's manual for maintenance intervals and procedures.

Cleaning Plate

Remove any excess debris which may get into the housing of the unit.

Engine Speed

- Engine speed is factory set according to the speeds listed in the Specifications section of this manual. Do not tamper with the governor setting. The governor establishes safe operating limits which must not be exceeded.
- 2. Refer to the engine Owner's Manual for procedure on setting operating and idle speeds.
- The engine operating speed should be set to 3600 RPM.
- 4. The engine idle speed must not exceed 1800 RPM. If the idle speed is greater than 1800 RPM the clutch may not disengage.

Battery Maintenance

- Loose or corroded battery terminals will lead to weak starts and poor charging. Clean posts and connectors with a wire brush for best connection. Remove dirt from case using a solution of (2) teaspoons baking soda and (1) pint of water. Dry completely.
- Always recycle old battery when replacing. Improper disposal of batteries can lead to contamination of soil and ground water.

Battery Charging

 If unit is not routinely used, charging your battery may be necessary. An unused battery will self-discharge over time. Under charged batteries may suffer permanent damage and premature failure.

Belt Adjustment

If any belt stretch develops follow these steps:

Refer to Main Assembly, page 22.

- 1. Remove the belt guard, refer to engine assembly pages.
- Loosen (do not remove) the four hex head capscrews (#32) securing the engine deck to the baseplate.
- 3. Tighten the belt by lifting the engine deck to provide 3/8 - 3/4 inch of "play" on one side of the belt. Be sure to keep the engine deck level with the baseplate when adjusting the belt.
- 4. Retighten the four hex head capscrews.
- 5. Reinstall the beltguard.

Checking Hydraulic Fluid

- To avoid contaminating the hydraulic oil clean all dirt & debris from around the fill plug on handle.
- 2. Remove fill plug. With handle in operating position, oil level to be at bottom edge of inside hole as shown.

SERVICE

Assembly and disassembly should be preformed by a service technician who has been factory trained on MBW equipment. the unit should be clean and free of debris. Pressure washing before disassembly is recommended.

- Prior to assembly, wash all parts in a suitable cleaner or solvent.
- Check moving parts for wear and failure. Refer to the Replacement Section of this manual for tolerances and replacement cycles.
- All shafts and housings should be oiled prior to pressing bearings. Also ensure that bearings are pressed square and are seated properly.
- All bearings should be replaced when rebuilding any exciter or gearbox.
- All gaskets and seals should be replaced after any disassembly.

Torque Chart

SIZE	GRADE 2	GRADE 5	GRADE 8			
1/4-20	49 in∙lbs	76 in•lbs	9 ft•lbs			
1/4-28	56 in∙lbs	87 in∙lbs	10 ft•lbs

	ft-lbs x 1.3558 = N·m					

Service Tools

Part No.	Description
16129	Rubber Test Mat
16031	Decal Set
17368	Kit, Rebuild, Lower Hydraulic
19606	Kit, Rebuild, Upper Hydraulic

Main Disassembly Procedure (Diesel Engine)

Refer to Main Assembly, page 22. for disassembly.

- 1. Clean all visible debris from the machine before servicing.
- 2. Remove the four hex head capscrews (#32) securing the engine deck (#20) to the baseplate (#5). Use caution as the engine deck will drop down.

Refer to DIESEL ENGINE ASSEMBLY, page 38. Sections of this manual for belt guard & belt removal.

- 3. Remove the four socket head capscrews (#32) securing the belt guard (12) to the mount plate (#16) on the engine (#15) and remove the beltguard.
- 4. Slide the belt (#4) off the clutch (#7).
- 5. Remove the two flange screws (#23) securing the bellows retainer (#15), and remove the retainer.
- 6. Push the lip of the bellows (#3) through the hole in the engine deck.
- 7. Disconnect the hydraulic line (#21) from the control head in the handle assembly. Keep the end of the hydraulic line and control head fitting free of dirt and debris by using tape. Be careful to use a drain pan to catch the hydraulic oil.
- 3. Use the main lift hook on the rollcage (#19) to separate the engine deck from the baseplate. Be careful to guide the hydraulic line through the handle assembly and engine deck as the subassemblies are separated to prevent damage to components. If further disassembly of the engine deck is required proceed to step 9. If baseplate service is required refer to the Baseplate Disassembly Procedure section of this manual.
- 9. Disconnect the throttle cable (#18) from the engine.
- 10. Remove the handle assembly by removing the four flange screws (#28) securing the handle shock mount (#19) to the engine deck (#21).
- 11. Remove the four hex head capscrews (#33) securing the rollcage to the engine deck and remove the rollcage.

Refer to DIESEL ENGINE ASSEMBLY, page 38.

- 12. Disconnect the negative "black" battery cable (#10) from the engine mount bolt (#29).
- 13. Use electrical tape to enclose the terminal of the negative "black" battery cable to prevent "accidental discharge" of the battery.
- 14. Disconnect the positive "red" battery cable (#11) from the starter of the engine.
- 15. Use the electrical tape to enclose the terminal of the positive "red" battery cable to prevent "accidental discharge" of the battery.
- 16. Remove the three 6mm bolts (#35) securing the ignition box to the mount (#14).
- Remove the four hex head screws (#34) securing the battery box (#19) to shockmounts (#18), remove battery box and cables. Then remove four hex head flange screws (#28) and mounting brackets (#21).
- 18. Remove the four hex head capscrews (#29) securing the engine to the engine deck and remove the engine (#15).

Main Disassembly Procedure (Gasoline Engine)

Refer to Main Assembly, page 22. for disassembly.

- 1. Clean all visible debris from the machine before servicing.
- 2. Remove the four hex head capscrews (#33) securing the engine deck (#21) to the baseplate (#4). **Use caution as the engine deck will drop down.**

Refer to GASOLINE ENGINE ASSEMBLY, page 36. Sections of this manual for belt guard & belt removal.

- 3. Remove the four socket head capscrews (#12) securing the belt guard (#7) to the mount plate (#9) and remove the beltguard.
- 4. Slide the belt (#3) off the clutch (#4).
- 5. Remove the two flange screws (#23) securing the bellows retainer (#15), and remove the retainer.
- 6. Push the lip of the bellows (#3) through the hole in the engine deck.
- 7. Disconnect the hydraulic line (#21) from the control head in the handle assembly. Keep the end of the hydraulic line and control head fitting free of dirt and debris by using tape. Be careful to use a drain pan to catch the hydraulic oil.
- 8. Use the main lift hook on the roll cage (#19) to separate the engine deck from the baseplate. Be careful to guide the hydraulic line through the handle assembly and engine deck as the subassemblies are separated to prevent damage to components and personal injury. If further

- disassembly of the engine deck is required proceed to step 9. If baseplate service is required refer to **Baseplate Disassembly Procedure** section of this manual.
- 9. Disconnect the throttle cable (#18) from the engine.
- 10. Remove the handle assembly by removing the four flange screws (#28) securing the handle shock mount (#19) to the engine deck.
- 11. Remove the four hex head capscrews (#33) securing the rollcage (#20) to the engine deck (#21) and remove the rollcage.
- 12. Remove the four hex head capscrews (#12) securing the engine (#3) to the engine deck (#21) and remove the engine.

Exciter Oil Change Procedure

Refer to Figure 1

- 1. If possible run unit for approximately 5 minutes to warm oil before draining.
- 2. Clean all dirt and debris from baseplate before disassembly to prevent contamination of exciter oil.
- If installed, remove the two 1" socket head capscrews (#1) and bushings (#3) securing the baseplate extensions (#2) to the baseplate (#4) from the recoil/ oil drain side of the baseplate.
- 4. Tilt the plate toward a drain pan to aid in the removal of all used oil and particles.
- Remove the socket head pipe plug (#5) from the baseplate and drain the oil. Examine the oil for metal chips as a precaution to future troubles.
- Tip the plate opposite the drain hole, and fill the baseplate through the pipe plug opening with exciter oil to level specified in the Fluid Levels section of this manual. Use only MBW Ground Pounder Exciter Oil.
- 7. Reinstall the socket head pipe plug using sealant (LOCTITE #565).
- 8. If equipped, reinstall the bushings and baseplate extension using antisieze lubricant (LOCTITE #767).

Lower Hydraulic Seal Replacement

Refer to LOWER SHAFT ASSEMBLY, page 30.

Note: The seals (#6), guide ring (#4), and gaskets (#17 and #18) should be replaced as a set. MBW recommends purchasing rebuild kit #17368 for ease of repairs (Seals are pre-assembled to the spool).

1. Position the handle in locked position and set the lock pin.

Refer to Main Assembly, page 22. for side cover removal.

 Remove the six flange screws (22) securing the side cover (#12) to the recoil/oil drain side of the baseplate. Loosen hex head bolts (#32) on the oil drain side only. Lift the engine deck up to allow the side cover to be removed.

Refer to Control Head Assembly, page 30.

- 3. Remove plug (#6) from the control head housing.
- 4. Remove the hydraulic line (#21) from the 90 degree fitting (#13) on the hydraulic housing. Be careful to use a drain pan to catch the hydraulic oil.
- 5. Remove the 90 degree fitting (#13) from the hydraulic housing.
- 6. Remove the four flange screws (#22) securing the hydraulic housing (#16) and cylinder mount plate (#20) to the input shaft cover (#12) and remove the hydraulic housing.
- Remove the shift spool (#15) from the shift shaft (#10) by sliding the shift spool out of the baseplate and holding it secure while un-threading the shift spool.
 NOTE: This connection is left hand thread.
- 8. If you purchased the **rebuild kit (MBW Part Number 17368)** go to step #12.
- 9. Remove the seal guide ring (#4) from the shift spool.
- 10. Remove the damaged or worn seals (#6) from the shift spool (#15). Note the orientation of the sealing lips of the seals to be replaced. Be careful not to scratch the inner diameter sealing surface of the shift spool when removing the seals.
- Remove the four flanged capscrews (#21), the cylinder cover (#19) and the cylinder gasket (#18).
 Be sure to remove all of the gasket pieces from the hydraulic housing to provide a good seal surface for the new gasket.
- 12. Remove the bleeder screw (#14) from its port on the hydraulic housing (#16). Thoroughly clean and inspect the bleeder screw for damage. Replace if needed.
- 13. Clean and inspect the shift spool (#15) and the hydraulic housing (#16).
- 14. Reinstall the bleeder screw (#14) into its port in the hydraulic housing (#16).

- 15. Install the new cylinder gasket (#18), the cylinder cover (#19) and the four flanged capscrews (#21).
- 16. Remove all mount gasket material from the input shaft cover (#12). Be careful to keep debris and gasket pieces from entering the exciter assembly when cleaning the cover.
- 17. If you purchased the **rebuild kit (MBW Part Number 17368)** go to step #20.
- 18. Assemble the new seals (#6) to the shift spool (#15). Note the orientation of the seal lips. Hint: use hydraulic oil to lubricate the seal inner diameter before pressing onto the spool. Beware the slot cut on the shift spool it may be sharp. Press the seal on "WITH" the slot and NOT "ACROSS" the slot.
- 19. Assemble the new guide ring (#4) to the shift spool (#15).
- 20. Thread the shift spool (#15) onto the shift shaft (#10). **Note the left hand thread.**
- 21. Install a new mount gasket (#17) on the hydraulic housing (#16).
- 22. Guide the hydraulic housing over the shift spool seals and guide ring and secure the cylinder mount plate (#20) to the input shaft cover (#12) using the four flange screws (#22) removed in step 5 using LOCTITE #243 on the screw threads. Note: Tighten the screws in a criss-cross pattern, tighten evenly to prevent cocking the cylinder mount plate.
- 23. Reinstall the 90 degree fitting (#13) into the hydraulic housing (#16).
- 24. Clean and reattach the hydraulic line (#21) to the 90 degree fitting (#13) on the hydraulic housing. Be sure the hydraulic line does not bind in the grommet. Loosen and rotate the hydraulic fitting (#13) and rotate it as required.
- 25. Follow the steps for Bleeding And Adjustment Of Hydraulic Controls section of this manual.
- 26. Reinstall the side cover removed in step 2 using LOCTITE #243 on the screw threads.
- 27. Lower engine deck to level position and tighten hex head bolts (#32).

Bleeding And Adjustment of Hydraulic Controls

Refer to figure 2 on next page.

- Remove the six flange screws (#2) securing the side cover (#3) to the recoil/oil drain side of the baseplate. Loosen hex head bolts (#1) on the oil drain side only. Lift the engine deck up to allow the side cover to be removed.
- 2. Position the handle in the operation position as shown.

- 3. Check the hydraulic line (#4) for loose fittings and tighten as needed.
- Remove the socket head plug (#7) from the control head.
- 5. Loosen the bleeder screw (#5) located at the hydraulic control housing of the exciter.
- 6. Fill the control head with hydraulic fluid as shown in the Maintenance Checking Hydraulic fluid section of this manual.
- 7. Place a drip pan or shop rag below the bleeder to catch any excess oil.
- 8. Slowly operate the control handle (#6) from the forward to the reverse position while watching the bleeder screw hole for air bubbles. If no air bubbles are seen, hold the control handle in the reverse position and tighten the bleeder. If air bubbles are still present at the end of the stroke, refill the control head with hydraulic oil and repeat this procedure.
- After the air bubbles have been removed, tighten the bleeder screw (#5) and adjust the hydraulic oil level in the control head by pushing the shift handle to the forward position and then pulling it into the reverse position until it stops. Repeat this procedure two times.
- 10. With the shift lever in the forward position fill the control head with hydraulic oil as shown in step 6.
- 11. Reinstall the socket head plug (#7).
- 12. Reinstall the side cover (#3) removed in step 1 using LOCTITE #243 on the screw threads (#2).
- 13. Lower engine deck to level position and tighten hex head bolts (#1).

Baseplate Disassembly Procedure

Reference the Main Disassembly Procedure (diesel) or (gasoline) Engine, listed earlier in this section, to separate the engine deck from the baseplate.

Refer to Main Assembly, page 22.

- 1. If installed, remove the four socked head capscrews (#38), extension plates (#8) and bushings (#9) from the sides of baseplate (#4).
- 2. Remove the twelve hex head flange screws (#23) securing the side covers (#12) to the baseplate.
- 3. Remove the four hex head flange screws (#24) securing the bellows mounts (#14) to the baseplate and remove the bellows mounts and bellows (#3).
- 4. Disconnect the hydraulic line (#22) from the hydraulic fitting.
- 5. Remove the four hex head flange screws (#23) securing the hydraulic guard (#13) to the baseplate and remove the hydraulic guard and hydraulic line from the baseplate.

Refer to BASEPLATE ASSEMBLY, page 28.

- 6. Remove the hex head flange screw (#22) and washer (#14) securing the pulley (#19) to the input shaft (#16) and remove the pulley.
- 7. Remove the twenty hex head flange screws (#22) securing the baseplate cover (#13) to the baseplate (#15) and remove the baseplate cover.
- 8. Remove the oil drain plug (#25) and completely drain the exciter oil into a drain pan. Examine the oil for metal chips as a precaution to future troubles.
- 9. Note the position of the gear timing marks.
- 10. Remove the socket head capscrews (#24) securing the exciter weights (#17) to the shafts and remove the exciter weights.

Refer to LOWER SHAFT ASSEMBLY, page 30.

- 11. Place a shop rag under the hydraulic housing (#16) to catch the oil and remove the four flange screws (#22) securing the cylinder mount plate (#20) to the input shaft cover (#12) and remove the hydraulic housing (#16) from the baseplate.
- 12. Remove the 90 degree hydraulic fitting (#13).
- Remove the four hex head flange screws (#21) securing the cylinder cover (#19) to the hydraulic housing (#16) and remove the cylinder cover and gasket (#18).
- 14. Remove the shift spool (#15) from the shift shaft (#10) by sliding the shift spool out of the baseplate and holding it secure while unthreading the shift spool.
 NOTE: This connection is left hand thread.

Refer to BASEPLATE ASSEMBLY, page 28.

- 15. Remove the plastic plugs (#1) from the threaded holes in the shaft covers (#7, #9, #12 & #18). This can be done using a #2 phillips screwdriver lightly tapped into the center of the plug and unthreading it as a screw.
- 16. Clean all dirt from the threaded holes in the shaft covers which were not plugged and "chase" the threads with a 5/16-18 UNC thread tap.
- 17. Remove the covers from the idler shaft (#8) ends of the baseplate by removing the flange screws (#23) and using two 5/16-18 x 2" long screws to press off the covers by installing them into the threaded holes cleaned in the previous steps. Turn both screws evenly to prevent binding of the cover in the bore.
- 18. Note: Make sure the bearings and their inner races are kept as a matched set.
- 19. Remove the idler shaft (#8) and idler gear (#11) from the baseplate.
- 20. Press the inner bearing races from the ends of the idler shaft (#8).
- 21. Press the idler gear (#11) off the idler shaft (#8) and remove the key. (#12).
- 22. Repeat steps 16 and 17 for the input shaft covers.
- 23. Remove the input shaft (#16) as an assembly from the baseplate.
- 24. Slide the input gear (#10) to one end of the input shaft and remove the helix pin (#11) from the input shaft and slide out the helix pin carrier (#9) as a subassembly.
- 25. Press the inner bearing races from the ends of the input shaft (#16).
- 26. Slide the input gear (#10) off of the input shaft (#16).
- 27. Remove the roller bearings (#4) from the shaft covers (#7, #9, #18 & #12) by removing two 5/16" flange head bolts (#21) from the covers and use a 1/4" x 2" long pin punch to "tap" the bearings out of the covers. Alternate between the access holes evenly to prevent binding of the bearings in the covers.

Refer to LOWER SHAFT ASSEMBLY, page 30.

- 28. Note: performance of the following steps will require replacement of the ball bearings (#3). M-B-W recommends replacement of these bearings as a set at every complete disassembly or rebuild.
- 29. Remove the internal retaining ring (#8) from the helix pin carrier (#9) and remove the shift shaft (#10) and bearings (#3) as a subassembly from the carrier.

- 30. Remove the e-clip retaining ring (#5) securing the bearings to the shift shaft.
- 31. Secure the bearings in a vice and press out the shift shaft (#10). Note the position of the spacer washer (#7).

Handle Disassembly Procedure

Refer to Main Assembly, page 22.

- 1. Disconnect the hydraulic line (#22) from the fitting in control head (9) of the handle. Use a drain pan to catch the hydraulic oil.
- 2. Remove the four hex head flange screws (#28) securing the handle shock mount (#19) to the engine deck (#21).
- 3. Remove the handle assembly from the main assembly.
- 4. Disconnect the throttle cable (#18) from the engine.
- 5. Remove the four flat head socket screws (#39) securing the spindle mounts (#11) to the shockmounts (#19).

Refer to Handle Assembly, page 28.

- 6. Remove the two flat head socket screws (#21) securing the throttle lever (#7) to the handle and remove the throttle lever and throttle cable as a subassembly from the handle.
- 7. Remove the four hex head flange screws (#31) securing the handle mounts (#4) to the handle (#8) from inside the tube.
- 8. Remove the two jam nuts (#32) securing the threaded rod (#2) to the handle and remove the handle bumper shockmount (#3) and threaded rod.
- 9. Drive the spirol pin (#29) from the control handle (#17) and separate the control handle from the control shaft (#20).
- 10. Remove the four hex head flange screws (#30) securing the handle bars (#11 and #12) to the handle (#8) and remove the handlebars from the handle.
- 11. Remove two self tapping screws (#1) from handle tube (#8) and remove tube cap (#13)
- 12. Remove retaining rings (#6) from control shaft (#20) and two flange lock screws (#24) from shift bracket (#10) and slide control shaft (#20) out of handle tube.
- 13. Remove bearings (#14) from handle tube (#8).
- 14. Remove four flange lock screws (#27) from control head (#9) and slide control head out end of handle tube (#8).
- 15. Remove shoulder bolts (#18), washer (#26) and locknuts (#22) from shift linkage (#16).

Control Head Disassembly Procedure

Refer to Control Head Assembly, page 30.

- 1. Remove the hydraulic fitting (#1), adapter fitting (#14) and O-ring (#3) from the control head housing (#7).
- Push piston shaft (#12) out of control head by lightly tapping the exposed end, being careful not to damage the shaft.

Note the orientation of hydraulic seal (#5) lip direction.

- 3. Remove seal (#5) and guide bearing (#10) from shaft (#12).
- 4. Remove seal cap (#13) and washer seal (#2) from control head (#7).

Note: When removing seals be careful not to scratch or damage seal mounting surfaces.

- 5. Remove hydraulic seal (#9), guide ring (#11) and wiper seal (#8) from seal cap (#13).
- 6. Remove socket pipe plugs (#15 & 16), and hydraulic fitting (#6) from control head (#7).
- 7. If Required use a 1/4" pin punch to drive the slide bushing (#4) out of the control head (#7).

Clean the control head (#7) to remove any dirt or debris, making sure all ports & passages are open.

Baseplate Assembly Procedure

Refer to BASEPLATE ASSEMBLY, page 28.

1. Clean all baseplate components.

Note: Make sure the bearings and their inner races are kept as a matched set.

- 2. Inspect all bearings, shafts, helix pin carrier and gears for wear, debris and discoloration from heat. Replace as needed. Replace the roller bearings and the inner races on each shaft as a set (both bearings on the shaft) as needed. Replace the helix carrier ball bearings as a set at each complete disassembly or rebuild. Replace all seals and gaskets removed at each disassembly or inspection.
- 3. Install the input shaft cover seal (#5) into cover (#9).
- Press the roller bearings (#4) into all four of the covers (#7, #9, #12 & #18). Note: Make sure the bearings and their inner races are kept as a matched set.
- Install the hex head flange screws (#21) into the shaft bearing covers using LOCTITE #243 thread locker sealant.
- 6. Install the plastic plugs (#1) in the threaded holes used to press the covers out of the baseplate.
- 7. Install the key (#12) into the idler shaft (#8).
- Align the idler gear (#11) with the key (#12) and idler shaft (#8) and press the idler gear onto the idler shaft using exciter oil as a lubricant. Reference the figure 5 for the idler gear and shaft orientation.
- Press the bearing inner races onto the idler shaft/ gear assembly. The flanged end of the inner race goes toward the shoulder on the shaft.
- 10. Place the idler shaft and gear assembly into the baseplate housing in the forward location. Note: The housing is not symmetric. The input/pulley side of the housing has a pocket machined for the belt bellows. This pocket is to be oriented toward the front left side of the machine. The end of the idler

- shaft with the hole goes toward the front right side of the machine with the breather/cover (#18).
- 11. Install the idler shaft covers (#7 on the pulley side, and (#18 on the hydraulic side). Secure each cover with four hex head flange screws (#23) using LOCTITE #243 on the bolt threads and torque the flange screws to 13 ft.-lbs. See the figure #3 for LOCTITE #515 gasket maker application. Check idler shaft for minimum of .020" end play after covers are installed and the bolts are torqued.
- 12. Install the 90 degree fitting (#2) containing the roll pin (#20) into the bearing cover (#18) using LOCTITE #565 sealant on the threads. Make sure the port for the breather faces the top of the baseplate housing.
- 13. Install the breather (#3) into the 90 (#2) degree fitting.
- 14. Install the exciter weights (#17) on the idler shaft (#8) and secure with four socket head cap screws (#24) using LOCTITE #243 thread locker sealant and torque the cap screws to 32 ft.-lbs.
- 15. Press one bearing inner race onto one end of the input shaft (#16). Note: Make sure the bearings and their inner races are kept as a matched set. The flange on the inner race goes toward the shoulder of the shaft.
- 16. Install the input gear (#10) onto the input shaft (#16) and slide to the end with the bearing inner race.
- 17. Press the other bearing inner race onto the input shaft (#16).
- Install the input shaft subassembly into the baseplate with the keyed end toward the left side (pulley side) of the base plate.
- 19. Install the pulley side shaft cover (#9), containing the shaft seal (#5) over the input shaft on the pulley side

- of the baseplate. See the figure #3 for LOCTITE #515 gasket maker application. Lubricate the input shaft seal and bearing with exciter oil before inserting the input shaft through the oil seal in the cover to prevent tearing the seal.
- Secure the input shaft cover with the four flange head crews (#23) using LOCTITE #243 thread locker sealant on the bolt threads and torque the capscrews to 13 ft.-lbs.

Refer to LOWER SHAFT ASSEMBLY, page 30.

- 21. Install the other input shaft cover (#12) and secure with the four flange head screws (#22) using LOCTITE #243 thread locker sealant and torque the screws to 13 ft.-lbs. See the figure #3 for LOCTITE #515 gasket maker application. Check input shaft for minimum of .020" end play after covers are installed and the bolts are torqued.
- 22. Install one exciter weight (#17) to the input shaft on the hydraulic housing side of the baseplate with two socket head cap screws (#24) using LOCTITE #243 thread locker sealant and torque the cap screws to 30 ft.-lbs. Be careful to use a small amount of thread locker to avoid dripping it into the helix pin carrier bearings at installation.
- 23. Slide the input gear (#10) toward the pulley side of the input shaft (#16). The gears should not be meshing at this time.

Refer to LOWER SHAFT ASSEMBLY, page 30.

- 24. Install the ball bearings (#3) and the spacer washer (#7) onto the shift shaft (#10) and secure with the e-clip (#5).
- 25. Press the shift shaft and ball bearing assembly into the helix pin carrier (#9) and secure with the internal retaining ring (#8).

26. Lubricate the helix pin carrier/shift shaft assembly with exciter oil and slide into the input shaft and install the dowel pin (#11).

Note: Helix pin carrier MUST slide freely in input shaft.

- 27. Slide the helix pin/carrier to the middle of the helix and orient the dowel pin parallel with the bottom of the baseplate housing (#15).
- 28. Align the timing marks on both gears and slide the input gear over the helix pin/carrier and into mesh with the gear on the idler shaft. Note position of exciter weights (both weights in the down position)
 See the figure #5 for setting the gear timing.
- 29. Install the other exciter weight (#17) to the input shaft (#16) with two socket head cap screws (#24) using LOCTITE #243 thread locker sealant on the threads and torque the cap screws to 30 ft.-lbs. Be careful to use a small amount of thread locker to avoid dripping it into the helix pin carrier bearings at installation.
- 30. Check the gear timing to assure free motion of the shift shaft/helix pin carrier within the helix of the input shaft for the full range of motion from one end of the helix to the other.

Refer to LOWER SHAFT ASSEMBLY, page 30. for steps #32 thru #42.

- Note: The seals (#6), guide ring (#4), and gaskets (#17 and #18) should be replaced as a set. MBW recommends purchasing rebuild kit #17368 for ease of repairs (Seals are pre-assembled to the spool).
 - 31. If rebuild kit #17368 was purchased, skip to step #34.
 - 32. Assemble the new seals (#6) to the shift spool (#15). Note the orientation of the seal lips. Hint: use hydraulic oil to lubricate the seal inner diameter before pressing onto the spool. Beware the slot cut on the shift spool. It may be sharp. Press the seal on "WITH" the slot and NOT "ACROSS" the slot.
 - 33. Thread the shift spool with seals onto the shift shaft (#10). **Note the left had thread.**
 - 34. Assemble the new guide ring (#4) to the shift spool.
 - 35. Install a new mount gasket (#17) onto the hydraulic housing (16).
 - 36. Lubricate the inside of the hydraulic housing (#16) and the seal lips with hydraulic oil. See Maintenance section for hydraulic fluid type.
 - 37. Install the hydraulic housing over the hydraulic seals and guide ring. Be careful not to damage the guide ring and hydraulic seals during installation.
 - 38. Secure the mount plate (#20) over the hydraulic housing (#16) to the input shaft cover (#12) with the four flanged cap screws (#22) using LOCTITE #243 thread locker sealant on the threads and torque the cap screws evenly in stages to 13 ft.-lbs.

Make sure the bleeder screw port (#14) is in the vertical position.

- 39. Install the gasket (#18) and cover (#19) to the hydraulic housing (#16) with four hex head flange screws (#21) using LOCTITE #243 thread locker sealant on the threads and torque the cap screws to 76 in-lbs.
- 40. Install the 90 degree fitting (#13) into the port on the hydraulic housing (#16).
- 41. Install the bleeder screw (#14) loosely into the port fitting of the hydraulic housing.
- 42. Install the socket head pipe plug (#25) into the oil drain port using LOCTITE #565 pipe sealant.
- 43. Pour in the exciter oil. Use only MBW Ground Pounder Exciter Oil. The amount of exciter oil required is shown in the FLUID LEVELS section of this manual.
- 44. Install the baseplate cover (#13) using LOCTITE #515 gasket maker on the lip of the mounting surface and secure with twenty hex head flange screws (#22) using LOCTITE #243 on the threads. See the figure #4 for LOCTITE #515 gasket maker application.
- 45. Install the key (#6) into the input shaft (#16).
- 46. Install the pulley (#19) with the longer hub shoulder toward the baseplate housing.
- 47. Install the pulley mount washer (#14) and secure it to the input shaft with the hex head flange screw (#22) using LOCTITE #243 thread locker sealant on the threads.

Refer to engine pages (Gasoline or Diesel)

48. Install the v-belt (#3 or #4) to the pulley of the baseplate assembly.

Refer to Main Assembly, page 22.

- 49. Install the side cover (#12) on the pulley side of the baseplate housing and secure with six hex head flange screws (#23) using LOCTITE #243 thread locker sealant.
- 50. Install the bellows (#3) into the bellows mount plate (#14) and secure it to the baseplate with four hex head flange screws (#24). Note spacer washers (#29) between plates (#14).
- 51. Connect the hydraulic line (#22) to the 90 degree fitting on the hydraulic housing.
- 52. Install the grommet (#2) into the hydraulic guard (#13).
- 53. Guide the hydraulic line(#22) through the grommet (#2) in the hydraulic guard (#13) and secure the guard to the hydraulic side of the baseplate with the four hex head flange screws (#23). Set the side cover (#12) off to the side until bleeding and final assembly is done. The exciter is now ready for final assembly.

54. If required, install the bushings (#9), extension plates (#8), and 1" socket head cap screws (#37) to the sides of baseplate housing using LOCTITE #767 antisieze compound on the bushings and bolt threads.

Control Head Assembly Procedure

Refer to Control Head Assembly, page 30.

- Clean and dry all parts to be assembled.
- 2. If required press the slide bushing (#4) into the control housing (#7).
- Press the hydraulic seal (#5) onto the piston shaft (#12). Be careful to orient the seal lip to face away from the guide ring groove. Tip: Use approved hydraulic oil to lubricate the seal inside diameter to ease assembly. See Maintenance Section for type of hydraulic oil.
- 4. Assembly the bearing guide ring (#10) to piston shaft (#12) groove behind the hydraulic seal (#5).

Note: Use hydraulic oil to lubricate guide ring & hydraulic seal before assembling into control housing.

- 5. Slide the piston shaft assembly (#12) into the control head housing (#7), being careful not to damage guide ring or hydraulic seal when entering control housing.
- 6. Install O-ring (#3) and hydraulic fitting (#1) to adapter nut (#14).
- 7. Install adapter nut assembly (#14) into control head housing (#7).

Note: Use hydraulic oil to lubricate guide ring & hydraulic seals before assembling into seal cap.

- 8. Assemble guide ring (#11), hydraulic seal (#9) and shaft wiper seal (#8) into seal cap (#13).
- Install washer seal (#2) and seal cap assembly (#13) over piston shaft (#12) and into control head housing (#7).
- Assemble socket pipe plugs (#15 & 16) into control head housing (#7) using LOCTITE #565 pipe sealant.
- 11. Install hydraulic fitting (#6) into control head housing.

Handle Assembly Procedure

Refer to Handle Assembly, page 28.

- Install shift linkage (#16) to control head (#9) with shoulder bolt (#18), washer (#26) and lock nut (#25).
- Assemble shift bracket (#10) to shift linkage (#16) with shoulder bolt (#18), washer (#26) and lock nut (#25)
- 3. Install the control head assembly (#9) into the handle tube (#8) with four flange lock screws (#27).

- 4. Install plain bearings (#14) into each side of handle tube (#8).
- 5. Install control shaft (#20) into handle tube (#8) and secure with retaining rings (#6).

Note: Control shaft can be install for either right or left hand operation.

- 6. Install control handle (#17) to control shaft (#20) and secure by driving spiral pin (#29) thorough handle hub & control shaft.
- 7. Assemble shift bracket (#10) to control shaft (#20) with flange lock screws (#24).
- 8. Install throttle lever (#7) to handle tube (#8) with flat head screw (#21), lock washers (#23) and hex nuts (#22).
- 9. Install handle bars (#11 & 12) to handle tube (#8) using flange lock screws (#30).
- 10. Install tube cap (#13) to handle tube (#8) with self tapping screws (#1).
- 11. Install bumper bracket (#15) to handle tube (#8) using flange lock screws (#28).
- 12. Assemble threaded rod (#2), hex nuts (#32) and handle bumper (#3) to bumper bracket (#15).
- 13. Assemble handle mounts (#4) to handle tube (#8) with flange lock screws (#31).

Refer to Main Assembly, page 22.

- 14. Assemble spindle mounts (#11) to shock mounts (#19) with flat head screws (#39).
- 15. Install shock mounts/spindle assemblies onto handle.
- 16. Secure handle assembly to engine deck with four hex head flange screws (#28).

Final Assembly

Refer to Main Assembly, page 22.

1. Place engine (#2 or #15) on engine deck (#20) and align with engine mounting holes.

Refer to engine pages (Gasoline or Diesel)

2. Install four bolts, lock washers and washers (#11, #14 & #15) or (#29, #30 & #31) through the engine block into engine deck.

Note: If engine does not sit flat on engine deck, shim as needed.

Refer to DIESEL ENGINE ASSEMBLY, page 38.

- 3. Secure battery box mounting brackets (#21) to engine deck using four hex head flange screws (#28).
- 4. Assemble battery box (#19) to shockmounts (#18) with four hex head cap screws (#34) and lockwashers (#37).

- 5. Remove electrical tape from positive battery cable (#11) and assemble to engine starter.
- 6. Remove electrical tape from negative battery cable (#10) and assemble under head of engine mounting bolt (#29).
- 7. Secure engine ignition box to mounting bracket (#14) using three 6mm bolts (#35).

Refer to Main Assembly, page 22.

- 8. Assemble rollcage (#20) to engine deck (#21) with four hex head cap screws (#30), washers (#35) and lock nuts (#31).
- Using main lift hook on roll cage, lower engine deck assembly onto baseplate. Use care to route hydraulic hose through engine deck and up handle tube.
- 10. Install four bolts (#33) lockwashers (#35) and washers (#36) through engine deck into shockmounts on bottom plate.

Refer to engine pages (Gasoline or Diesel)

- 11. Slide belt (#3 or #4) onto clutch (#4 of #7).
- 12. Refer to the **Belt Adjustment** section of this manual to complete assembly.
- 13. Secure hydraulic line (#21) to control head fitting.
- Bleed the hydraulics according to the Bleeding and Adjustment of Hydraulic Controls section of this Manual.

Diesel Engine Throttle Adjustment

1. Check to make sure the throttle control lever (#1) is in the full stop position and the engine throttle arm (#4) is rotated to the full counter clockwise position. If not adjust as needed using the threaded portion of the throttle cable in bracket (#5) then tighten jam nuts (#6) after final adjustment.

- Push throttle control lever (#1) forward to full throttle position (do not force). While holding lever in this position screw in throttle stop set screw (#2) until you can feel it touch or start moving the throttle control lever. Assemble and tighten jam nut (#3) to lock this position.
- Start unit up and test for full throttle operation and shut down. Re-adjust as needed, full throttle RPM for diesel engine is 3600 to 3700, this is not adjustable.

Troubleshooting

SYMPTOM	REPAIR
	Fuel valve is closed, open valve (gasoline engine).
	2. Engine switch is in "STOP" position, turn switch to "ON" position (gasoline engine).
English days and start anotally	3. Fouled spark plug, clean or replace spark plug (gasoline engine).
Engine does not start or stalls.	4. Dirty or pugged injection nozzle, clean or replace if damaged.
	5. Electric start; low battery charge, recharge battery.
	6. Starter motor defective or worn, replace starter motor.
	7. Defective or worn ignition switch, replace ignition switch.
	Improper or old fuel, remove all fuel from tank & engine and replace with the proper fresh fuel.
Engine does not accelerate, is hard to	2. Fouled spark plug, clean or replace spark plug (gasoline engine).
start or runs erratically.	3. Dirty or pugged fuel filter, replace with new fuel filter.
	4. Dirty or pugged injection nozzle, clean or replace if damaged.
	5. Dirty or clogged air cleaner, clean or replace.
Engine over heats or runs hot.	Cooling fins are dirty or plugged, remove debris and clean.
Engine runs at full speed but machine	Belt tension too loose, tighten belt per Belt Adjustment section of this Manual.
does not move.	2. Worn belt, replace belt.
	Clutch malfunction, replace clutch.
	Too much hydraulic fluid in control head, set fluid level per Bleeding and Adjustment of Hydraulic Controls section of this manual.
	2. Belt is slipping, tighten belt per Belt Adjustment section of this Manual.
Slow or no forward travel speed.	3. Incorrect engine rpm., reset engine rpm per Specifications section of this manual.
	4. Material build-up on bottom of plate, remove all debris from bottom of plate.
	5. Mechanical failure, requires authorized MBW service repair.
	Not enough hydraulic fluid in control head, set fluid level per Bleeding and Adjustment of Hydraulic Controls section of this manual.
	Air in the hydraulic system, bleed system per Bleeding and Adjustment of Hydraulic Controls section of this manual.
Slow or no reverse travel speed.	Improper adjustment of hydraulic control system, requires authorized MBW service repair.
, i	4. Incorrect engine rpm., reset engine rpm per Specifications section of this manual.
	Material build-up on bottom of plate, remove all debris from bottom of plate.
	6. Mechanical failure, requires authorized MBW service repair.
	Leaking hydraulic connections, tighten connections.
Loss of hydraulic oil.	Leaking hydraulic line, replace hydraulic hose.
	3. Worn or damaged piston seals, requires authorized MBW service repair.

Parts Replacement Cycles and Tolerances

Bearings	Replace anytime a bearing is rough, binding, discolored or removed from housing or shaft.
Clutch	Replace clutch if it does not disengage below 1800 rpm.
Engine Components	Refer to your engine manufacturer's Owner's Manual.
Hardware	Replace any worn or damaged hardware as needed. Replacement hardware should be grade 5 and zinc plated unless otherwise specified.
Safety Decals	Replace if they become damaged or illegible.
Seals & Gaskets	Replace if a leak is detected and at every overhaul or tear down.
V-Belts	Replace if cracked, torn, or stretched to the point the belt won't tension properly.
Exciter Oil	Replace once every season or every 250 hours.

REPLACEMENT PARTS

The warranty is stated in this book on page36. Failure to return the Warranty Registration Card renders the warranty null and void.

MBW has established a network of reputable distributors/ dealers with trained mechanics and full facilities for maintenance and rebuilding, and to carry an adequate parts stock in all areas of the country. Their sales engineers are available for professional consultation. If you cannot locate an MBW distributor in your area, contact MBW or one of our Sales Branches listed below.

When ordering replacement parts, be sure to have the following information available:

- Model and Serial Number of machine when ordering MBW parts
- Model and Serial Number of engine when ordering engine parts
 This page intentional
- · Part Number, Description, and Quantity
- Company Name, Address, Zip Code, and Purchase Order Number
- · Preferred method of shipping

REMEMBER - You own the best! If repairs are needed, use only MBW parts purchased from authorized MBW distributors.

The unit's serial number can be found in the following locations:

- The model/serial number decal is located on the engine deck side plate behind the engine as shown above.
- The serial number is stamped on the back edge of the bottom plate and the back end of the engine deck as shown above

WARRANTY

WHAT DOES THIS WARRANTY COVER? MBW, Incorporated (MBW) warrants each New Machine against defects in material and workmanship for a period of twelve (12) months. "New Machine" means a machine shipped directly from MBW or authorized MBW dealer to the end user. This warranty commences on the first day the machine is sold, assigned to a rental fleet, or otherwise put to first use.

MBW warrants each Demonstration Machine against defects in material and workmanship for a period of six (6) months. "Demonstration Machine" means a machine used by MBW or its agents for promotional purposes. This warranty commences on the first day the machine is sold, assigned to a rental fleet, or otherwise put to first use.

This warranty covers the labor cost for replacement or repair of parts, components, or equipment on New Machines or Demonstration Machines, and MBW shall pay labor costs at MBW's prevailing rate to affect the warranted repair or replacement. MBW reserves the right to adjust labor claims on a claim-by-claim basis.

This warranty covers the shipping cost of replacement parts, components, or equipment via common ground carriers from MBW to an authorized MBW dealer. Air freight is considered only in cases where ground transportation is not practical.

MAY THIS WARRANTY BE TRANSFERRED? This warranty is non-transferable and only applies to the original end user of a new machine or demonstration machine.

WHAT DOES THIS WARRANTY NOT COVER?

- 1. This warranty does not cover any Used Equipment. "Used Equipment" means any MBW machine or equipment that is not a New Machine or a Demonstration Machine. All Used Equipment is sold **AS IS/WHERE IS WITH ALL FAULTS.**
- 2.This warranty does not cover any New Machine, Demonstration Machine, or their equipment, parts, or components altered or modified in any way without MBW's prior written consent. This warranty does not cover the use of parts not specifically approved by MBW for use on MBW products. This warranty does not cover misuse, neglect, shipping damage, accidents, acts of God, the operation of any New Machine or Demonstration Machine in any way other than recommended by MBW in accordance with its specifications, or any other circumstances beyond MBW's control. This warranty does not cover any New Machine or Demonstration Machine repaired by anyone other than MBW factory branches or authorized MBW distributors.
- 3. This warranty does not cover, and MBW affirmatively disclaims, liability for any damage or injury resulting directly or indirectly from design, materials, or operation of a New Machine or Demonstration Machine or any other MBW product. MBW's liability with respect to any breach of warranty shall be limited to the provisions of this document and in no event shall exceed an amount equal to the purchase price of the New Machine or Demonstration Machine purchased from MBW.
- 4. This warranty does not cover engines, motors, and other assemblies or components produced by other manufacturers and used on a New Machine or Demonstration Machine, as said engines, motors, and other assemblies or components may have warranties provided by the manufacturer thereof. This warranty does not apply to consumable items, such as v-belts, filters, trowel and screed blades, seals, shock mounts, batteries, and the like, all of which are sold AS IS/WHERE IS WITH ALL FAULTS.
- 5. This warranty does not cover the cost of transportation and other expenses which may be connected with warranty service but not specifically mentioned herein.

6. This warranty does not cover any updates to any New Machine, Demonstration Machine, or any other MBW product. MBW reserves the right to improve or make product changes without incurring any obligation to update, refit, or install the same on New Machines or Demonstration Machines previously sold.

WHAT MUST YOU DO TO OBTAIN WARRANTY COVERAGE? Each New Machine or Demonstration Machine is accompanied by a Warranty Registration Card. You must sign, date, and return the Warranty Registration Card to the place of origin of the New Machine or Demonstration Machine, either to MBW, Inc. at P.O. Box 440, Slinger, Wisconsin 53086, MBW (UK), Ltd. at Units 2 & 3 Cochrane Street, Bolton BL3 6BN, United Kingdom or MBW FRANCE SARL at ZA D'Outreville, 5 Rue Jean Baptiste Neron, Bornel 60540 France, within ten (10) days after purchase, assignment to a rental fleet, or first use. This signed warranty card is the buyer's affirmation that he has read, understood, and accepted the warranty at the time of purchase. Failure to return the warranty card as specified herein renders the warranty null and void. In order to receive warranty coverage consideration, warranty claims must be submitted within thirty (30) days after the New Machine or Demonstration Machine fails. Warranty claims must be submitted to MBW, Inc., MBW (UK), Ltd. or MBW FRANCE SARL, and written authorization for the return of merchandise or parts under the warranty must be obtained before shipment to MBW.

WHAT WILL MBW DO? MBW's obligation under this warranty is limited to the replacement or repair of parts for a New Machine or Demonstration Machine at MBW factory branches or at authorized MBW distributors, and such replacement or repair is the exclusive remedy provided hereunder. Labor must be performed at an authorized MBW distributor. MBW reserves the right to inspect and render a final decision on each warranty case, and MBW's repair or replacement is solely within the discretion of MBW.

IT IS EXPRESSLY AGREED THAT THIS SHALL BE THE SOLE AND EXCLUSIVE REMEDY UNDER THIS WARRANTY. UNDER NO CIRCUMSTANCES SHALL MBW BE LIABLE FOR ANY COSTS, LOSS, EXPENSE, DAMAGES, SPECIAL DAMAGES, INCIDENTAL DAMAGES, OR PUNITIVE DAMAGES ARISING DIRECTLY OR INDIRECTLY FROM THE USE OF THE NEW MACHINE OR DEMONSTRATION MACHINE WHETHER BASED UPON WARRANTY, CONTRACT, NEGLIGENCE, STRICT LIABILITY, OR ANY OTHER LEGAL THEORY.

THE FOREGOING WARRANTY IS EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR USE, AND FITNESS FOR A PARTICULAR PURPOSE, AND ALL OTHER OBLIGATIONS OR LIABILITY ON MBW'S PART. MBW NEITHER ASSUMES NOR AUTHORIZES ANY OTHER PERSON TO ASSUME ON BEHALF OF MBW ANY OTHER LIABILITY OR WARRANTY IN CONNECTION WITH THE SALE OR SERVICE OF ANY NEW MACHINE, DEMONSTRATION MACHINE, OR ANY OTHER MBW PRODUCT.

EXTENDED RAMMER WARRANTY - MODELS R422, R442, R482 & R483.

This extended warranty commences on the last day of MBW's standard, one year, "limited warranty" and runs for an additional four years (48 months). This extended warranty is limited to part replacement and shipping costs of rammer **bellows and non-metallic slide bearings only.** This extended warranty does not cover labor, down time, or any other cost beyond that of component replacement and freight. This extended warranty is subject to all limitations set fourth in MBW's "limited warranty", above.
